SUMMARY

Computer Science undergraduate specializing in Artificial Intelligence with hands-on experience in Machine Learning, Data Analytics, and Generative AI. Built end-to-end solutions involving time-series forecasting, Retrieval-Augmented Generation (RAG), predictive analytics, and NLP using Python-based technologies.

SKILLS

Languages	Python, Java, SQL
Data Science	Machine Learning, Deep Learning, Natural Language Processing (NLP), Time-Series Forecasting
Generative AI	Retrieval-Augmented Generation (RAG), Prompt Engineering, Semantic Search, Vector Databases
Data Engineering	ETL, Data Cleaning, Data Validation, SQL Analytics
Frameworks & Libraries	Pandas, NumPy, Scikit-learn, TensorFlow/Keras, FastAPI, LangChain, SentenceTransformers
Databases	PostgreSQL, MySQL, ChromaDB
Tools	Git, GitHub, Power BI, Tableau, Gradio, Streamlit, Matplotlib, Ollama

PROJECTS

A Meta-Learning Framework for Automated Model Selection in Time-Series Forecasting GitHub

- Developed a meta-learning framework to recommend the optimal forecasting model for unseen time-series datasets using statistical meta-features.
- Implemented ARIMA and Prophet forecasting pipelines, evaluated performance using RMSE, and trained a Random Forest meta-model for automated model selection.
- Built an interactive Streamlit dashboard to visualize forecasting results and model recommendations.
- Tech Stack:** Python, Pandas, NumPy, Scikit-learn, Statsmodels, Prophet, Streamlit

Enterprise SQL Analytics and Business Intelligence Platform GitHub

- Built an end-to-end Business Intelligence pipeline by extracting, cleaning, validating, and preparing a large-scale e-commerce dataset for analytics.
- Developed a scalable ETL workflow using chunk-based processing to generate a representative analytical dataset from a 5.27 GB raw dataset.
- Designed a PostgreSQL data warehouse with SQL-based analytics and interactive Power BI dashboards to monitor business KPIs and customer purchasing behavior.
- Tech Stack:** Python, Pandas, PostgreSQL, SQL, Power BI

Hybrid RAG-Based Recommendation & Knowledge Retrieval System GitHub

- Developed an AI-powered Pokémon assistant using Retrieval-Augmented Generation (RAG), semantic search, and recommendation techniques for knowledge retrieval and team suggestions.
- Built a semantic retrieval pipeline using SentenceTransformers embeddings and ChromaDB, and integrated local LLM inference using Ollama for grounded response generation.
- Developed a modular FastAPI backend and Gradio frontend supporting Pokémon lore retrieval, type-based recommendations, balanced team generation, and counter suggestions.
- Tech Stack:** Python, FastAPI, Gradio, LangChain, Ollama, ChromaDB, SentenceTransformers

EDUCATION

- Manipal Institute of Technology** Bengaluru, India
Bachelor of Technology - Computer Science (Artificial Intelligence) Sept 2022 – June 2026
- Relevant Coursework:** Data Structures & Algorithms, Database Management Systems, Machine Learning, Artificial Intelligence, Deep Learning, Natural Language Processing

CERTIFICATIONS

- IBM Data Science Professional Certificate
- AWS Data Engineering (Foundations)
- Google Data Analytics Professional Certificate
- Java Programming: Solving Problems with Software
